CCNA v1.1 (200-301) Full Course

Session 2: Lab Setup, Packet Tracer and PNETLab

Instructor: Aayush Chapagain
April 2026

Table of Contents

- Why lab setup is important
- Installing Packet Tracer
- PNETLab Deployment and Setup
- Accessing and Managing Lab Topologies

Why lab setup is important

- Enables hands-on learning beyond theoretical concepts
- Provides a real-world networking environment for practice
- Helps in understanding network behavior, configurations, and troubleshooting
- Essential for effective preparation for the CCNA 200-301
- Allows safe testing without affecting real production networks

"The more you practice, the stronger your networking skills become."

Installing Cisco Packet Tracer

- Download the latest version from the official Cisco Networking Academy platform
- Create or log in with a NetAcad account
- Install the software based on your operating system (Windows / macOS / Linux)
- Follow the installation wizard and complete the setup
- Launch Packet Tracer and verify successful installation
- Sign in to access the software

PNETLab Deployment and Setup

- PNETLab can be deployed in multiple environments based on requirements
- **Host Machine** using virtualization platforms (VMware / VirtualBox)
- **Physical Servers** such as rack servers or tower servers for high-performance labs
- **Cloud Environments** for remote access and scalable lab infrastructure
- Allocate appropriate resources (CPU, RAM, Storage) for optimal performance
- Configure basic network settings (IP address, gateway)
- Access PNETLab via web browser and verify successful deployment

PNETLab Deployment and Setup (Cont)

- Download the PNETLab OVA/ISO image
- Open **VMware Workstation** and deploy the virtual machine
- Import the PNETLab OVA file into VMware
- Allocate system resources (Minimum: 8GB RAM, 2+ CPU cores recommended)
- Configure network adapter (NAT or Bridged mode)
- Power on the virtual machine and complete initial setup
- Import network device images (Cisco routers, switches, etc.) for lab usage
- Access PNETLab via web browser using the assigned IP address
